

Acceptance Testing

UAT Execution & Report Submission

Date	October 2026
Team ID	6ab75a49da631abbf0cded44
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks
Document Type	User Acceptance Testing (UAT) Report

1. Purpose of Document

The purpose of this document is to define the UAT coverage for the **Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer** project. The report adapts the supplied UAT template to the ServiceNow workflow described in the reference project document and focuses on the standard laptop request, approval, automated catalog-task creation, and hardware assignment flow.

Source basis: The project reference states that the objective is to automate standard laptop procurement and configuration, reduce manual intervention and errors, improve task allocation, and enhance procurement efficiency.

2. UAT Scope

UAT Area	Scope / Expected Behaviour
Flow Designer configuration	A flow named Standard laptop task is configured in the Global application and runs as System user.
Service Catalog trigger	The flow is triggered from the Service Catalog request process.
Catalog Task creation	A Catalog Task is created for the Requested Item after approval.
Task details	Short description and description are set to Laptop need to Configured .
Assignment	The generated catalog task is assigned to the Hardware assignment group.
Approval condition	The configured approval value is Approved before the task is created/processed.
Standard Laptop catalog item	The Standard Laptop service catalog item uses the created flow through its Process engine configuration.
End-to-end verification	A Standard Laptop request is placed, approval is performed, and the resulting Catalog Task is checked for updated status and assignment.

The scope above is derived from the implementation activities and verification steps in the supplied project reference.

3. Defect Analysis

The supplied project reference does not contain a UAT defect log, severity counts, or individual defect records. Therefore, no defect counts are fabricated in this report. Defects should be recorded during actual UAT execution using the severity and resolution categories below.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	—	—	—	—	—
Duplicate	—	—	—	—	—
External	—	—	—	—	—
Fixed	—	—	—	—	—

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
Not Reproduced	—	—	—	—	—
Skipped	—	—	—	—	—
Won't Fix	—	—	—	—	—
Totals	—	—	—	—	—

4. Test Case Analysis

This section adapts the template's Test Case Analysis to the Standard Laptop Flow Designer process. The reference document describes implementation and verification steps, but it does not provide recorded UAT execution results. Accordingly, the test cases are listed as **Not Tested** until execution evidence is available.

Section	Test Case	Expected Result	Status
Flow Configuration	UAT-01: Create Standard laptop task flow	Flow is created with the specified name, Global application, and System user.	Not Tested
Flow Trigger	UAT-02: Configure Service Catalog trigger	Service Catalog is selected as the trigger and the trigger is saved.	Not Tested
Catalog Task	UAT-03: Create Catalog Task action	Create Catalog Task action uses the Requested Item record and Catalog Task table.	Not Tested
Task Details	UAT-04: Verify task description fields	Short description and description show <i>Laptop need to Configured</i> .	Not Tested
Assignment	UAT-05: Verify Hardware assignment	Assignment group on the created catalog task is Hardware.	Not Tested
Approval	UAT-06: Verify Approved condition	The configured approval value is Approved before the automated task proceeds.	Not Tested
Flow Activation	UAT-07: Verify flow activation	The Standard laptop task flow is saved and activated.	Not Tested
Catalog Assignment	UAT-08: Verify Standard Laptop catalog item	Standard Laptop catalog item is linked to the created flow in Process engine.	Not Tested
Request & Approval	UAT-09: Place and approve Standard Laptop request	A Standard Laptop request is placed and the request approval is completed.	Not Tested
End-to-End	UAT-10: Verify generated Catalog Task	Requested Item shows the Catalog Task with updated status, short description, and Hardware assignment.	Not Tested

5. UAT Execution Summary

Section	Total Cases	Not Tested	Fail	Pass
Flow Configuration	1	1	0	0
Flow Trigger	1	1	0	0
Catalog Task	1	1	0	0
Task Details	1	1	0	0
Assignment	1	1	0	0
Approval	1	1	0	0
Flow Activation	1	1	0	0
Catalog Assignment	1	1	0	0
Request & Approval	1	1	0	0
End-to-End	1	1	0	0
Total	10	10	0	0

Execution status: Pending UAT execution. The reference document describes the configured workflow and its intended verification steps; it does not provide evidence that these UAT cases were formally executed and passed.

6. UAT Workflow Checkpoints

Checkpoint	Reference Implementation / Expected UAT Check
1. Request initiation	Open Service Catalog → Hardware → Standard Laptop → Order Now.
2. Approval	Open the request, go to Approvers, and approve the request.
3. Requested Item	Open the Requested Item associated with the request.
4. Catalog Task	Open the Catalog Tasks section and verify the updated status, short description, and assignment group.
5. Expected automation	The flow creates the catalog task for laptop configuration and assigns it to Hardware after the required approval.

7. UAT Acceptance Criteria

ID	Acceptance Criterion	Evidence to Capture
AC-01	Standard Laptop request can be initiated from the Service Catalog.	Request number / screenshot
AC-02	Approval can be completed for the requested item.	Approval record / screenshot
AC-03	Flow creates a Catalog Task for the approved request.	Catalog Task record
AC-04	Catalog Task contains the configured laptop description.	Task field evidence
AC-05	Catalog Task is assigned to the Hardware group.	Assignment group evidence
AC-06	The Standard Laptop item is linked to the intended Flow Designer flow.	Process engine configuration

8. Conclusion

The UAT report has been adapted to the supplied template and populated with the essential project information and workflow-specific coverage from the reference document. The project is intended to automate standard laptop

procurement and configuration through ServiceNow Flow Designer, reducing manual intervention and improving task allocation. The reference project concludes that the automated workflow addresses procurement inefficiencies and supports timely laptop configuration.

Important: This document should be treated as the UAT execution template/report prepared from the supplied project documentation. Actual Pass/Fail results and defect counts should be entered after the UAT cases are executed.

9. Reference Implementation Details

Item	Configured / Documented Value
Flow Name	Standard laptop task
Application	Global
Run As	System user
Trigger	Service Catalog
Action	Create Catalog Task
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved
Catalog Item	Standard Laptop
