Define the Problem Statements

Date	October 2026	Team ID	6ab75a49da631abbf0cded44
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	Phase	Ideation Phase

Customer Problem Statement Template

These statements translate the reference project's procurement challenge into the customer/user point of view, focusing on delays, manual work, configuration, assignment, and user experience.

PS-1

I am	an employee requesting a standard laptop
I'm trying to	receive my laptop with configuration completed promptly
But	the procurement and configuration process can involve manual steps and delays
Because	configuration may require a separate task and can be overlooked or delayed
Which makes me feel	frustrated and increases my waiting time.

PS-2

I am	a member of the IT procurement team
I'm trying to	streamline standard laptop ordering and configuration
But	tasks may require manual creation, updating, and assignment
Because	the current process lacks sufficient automation
Which makes me feel	that time and IT resources are being used inefficiently.

PS-3

I am	a Hardware team member
I'm trying to	receive clear configuration work for approved Standard Laptop requests
But	configuration tasks may not be automatically generated and assigned
Because	the procurement process needs workflow automation
Which makes me feel	that task handoff can be delayed or unclear.

Project-linked problem statement

The current IT procurement process lacks efficiency and automation for standard laptop orders. Requests may require manual configuration handling, creating potential oversight or delay. The project therefore focuses on automating the workflow so approved requests generate configuration tasks and assign them to the Hardware team, reducing manual intervention and user wait time.
