

PROJECT DESIGN PHASE-II

Solution Requirements (Functional & Non-functional)

Automating Standard Laptop Orders with Flow Designer

Date	October 2026
Team ID	6ab75a49da631abbf0cded44
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Platform	ServiceNow
Maximum Marks	4 Marks

Document Purpose

This document defines the functional and non-functional requirements for a ServiceNow solution that automates the standard laptop procurement workflow. The structure follows the supplied Solution Requirements template, while the project-specific requirements are derived from the supplied ServiceNow project documentation.

1. Problem Statement

The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. Standard laptop requests may require configuration, but this step is prone to oversight or delay, causing user frustration and inefficient allocation of IT resources.

2. User Story

As a member of the IT procurement team, I want a streamlined process for ordering standard laptops so that tasks are automatically generated and assigned to the hardware team for configuration. This ensures laptops are promptly configured upon arrival, reduces user wait times, and minimizes manual intervention.

3. Project Objective

The objective is to implement an automated workflow using ServiceNow Flow Designer to facilitate procurement and configuration of standard laptops. The solution is intended to provide a seamless request experience, reduce manual intervention and potential errors, optimize task allocation, and improve efficiency and productivity in IT procurement operations.

4. Solution Scope

The documented solution covers creation of a Flow Designer flow, triggering from the Service Catalog process, automatic creation of a Catalog Task, assignment to the Hardware group, association of the flow with the Standard Laptop catalog item, approval handling, and verification of the resulting Catalog Task status.

5. Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Flow Creation	Create a Flow Designer flow named Standard Laptop Task ; use the Global application scope and System User execution context.
FR-2	Service Catalog Trigger	Configure a Service Catalog trigger so the automation starts as part of the standard laptop request process.
FR-3	Catalog Task Creation	Use the Create Catalog Task action and pass the Requested Item Record to the Request item field.
FR-4	Task Details	Set the Catalog Task short description and description to Laptop need to Configured .
FR-5	Assignment & Approval	Set Assignment group to Hardware and Approval to Approved for the generated Catalog Task.
FR-6	Flow Activation	Save and activate the configured Flow so it can execute for the Standard Laptop request process.
FR-7	Catalog Item Integration	Open the Standard Laptop catalog item and replace remaining process-engine automations with the created Standard Laptop Task flow.
FR-8	Request & Approval	Allow users to place the Standard Laptop order through Service Catalog and process the associated approval.
FR-9	Task Verification	After approval, verify the Requested Item's Catalog Tasks section and confirm the generated task shows the expected short description and assignment group.

6. Non-functional Requirements

Following are the non-functional requirements of the proposed solution. The descriptions below translate the project documentation's automation objectives into the categories used by the supplied template.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provide a streamlined Service Catalog experience for Standard Laptop requests and reduce unnecessary manual steps for users and IT staff.
NFR-2	Security	Run the configured flow as the documented System User and use controlled assignment/approval values so task processing follows the defined ServiceNow workflow.
NFR-3	Reliability	The approved Standard Laptop request should consistently generate the required Catalog Task with the configured description and Hardware assignment.
NFR-4	Performance	Automation should reduce delays associated with manual task creation and assignment, supporting timely configuration of requested laptops.
NFR-5	Availability	The activated flow and Standard Laptop catalog process should remain available for users to submit and process standard laptop requests.
NFR-6	Scalability	The Flow Designer approach should support repeated Standard Laptop requests without requiring manual creation and assignment of each Catalog Task.

7. Implementation Milestones

Milestone	Activity	Key Implementation Steps
Milestone 1	Flow	Create the Standard Laptop Task flow; configure Service Catalog trigger; add Create Catalog Task action; populate Requested Item Record; set short description, description, Assignment group = Hardware, and Approval = Approved; save and activate.
Milestone 2	Flow Assignment	Open Maintain Items; select Standard Laptop; update Process Engine; remove remaining automations and add the Standard Laptop Task flow; save the record.
Milestone 3	Service Catalog	Open Service Catalog → Hardware → Standard Laptop; place an order; review Order Status; open the Request Number; review Approvers; approve the request; open the Requested Item and inspect Catalog Tasks.

8. Acceptance / Verification Criteria

1. The Standard Laptop Task flow exists in Flow Designer with the documented configuration.
2. The flow uses a Service Catalog trigger and a Create Catalog Task action.
3. The generated Catalog Task contains the required short description and description.
4. The generated Catalog Task is assigned to the Hardware group.
5. The approval value is configured as Approved as documented.
6. The Standard Laptop catalog item is associated with the created flow.
7. A Standard Laptop request can be placed through Service Catalog and its approval can be processed.
8. The resulting Catalog Task can be opened from the Requested Item and its status, short description, and assigned group can be verified.

9. Expected Benefits

The automated workflow is intended to reduce manual overhead, support timely laptop configuration, optimize task allocation within the IT department, reduce user wait times, and provide a more seamless procurement process.

10. Conclusion

By automating the standard laptop procurement process with ServiceNow Flow Designer, the documented solution addresses the identified inefficiencies and manual overhead. The workflow creates and assigns the required Catalog Task after the relevant request and approval steps, supporting timely configuration and improved operational efficiency.

Source basis: ServiceNow Administration project documentation and the supplied Solution Requirements (Functional & Non-functional) template. Project-specific details are based on the supplied ServiceNow project document.
